

Biology of Hevea Rubber

Rubber is an economically important material that occurs naturally and can also be produced synthetically. Many advances have been made in the understanding of the cultivation and biology of the rubber tree, *Hevea brasiliensis*, and this book covers the essential elements of rubber breeding and physiology to provide a guide for cultivators of and researchers into this vital crop. It provides an in-depth analysis of plant structure and crop physiology, climatic requirements, latex production, genetics and breeding, biotechnology, molecular biology, soil tillage and crop establishment, nutrition, weed control, processing and quality.
